CHETAN SRIKANT MANDIGA

+91 9989714684 | Hyderabad, Telangana, India
chetansrikantmandiga@gmail.com | LinkedIn/Chetan-Srikant | GitHub/ChetanSrikant

OBJECTIVE

Systems Engineer with hands-on experience in Active Directory, Azure AD, and enterprise identity systems, supported by a strong foundation in applied AI, computer vision, full-stack development, and data platforms. Experienced in building AI-backed applications and supporting production infrastructure. Interested in AI systems engineering, scalable platforms, computer vision, and cloud-based AI deployment.

EDUCATION

B.Tech in Computer Science and Engineering, BML Munjal University **2021 - 2025**
Minor in Entrepreneurship, BML Munjal University **2023 - 2025**

SKILLS

Languages: Python, Java, C++, JavaScript
AI, ML & Computer Vision: NumPy, Pandas, scikit-learn, PyTorch, TensorFlow/Keras, OpenCV, YOLOv11, U-Net, Detectron2, Faster R-CNN
Web & Frameworks: React.js, Node.js, Express, Next.js, Streamlit, LangGraph
Databases & Platforms: MongoDB, MySQL, Firebase, Active Directory, Azure AD
Tools & Concepts: Git, REST APIs, Hugging Face embeddings, Groq, DSA, OOP, feature engineering, forecasting, system-design fundamentals

EXPERIENCE

Systems Engineer - IAM Cloud (Active Directory / Azure AD) **Aug 2025 - Present**
HCLTech *Noida, India*

- Manage Active Directory and Azure AD environments supporting user provisioning, access control, and hybrid-identity integration in an enterprise setup.
- Troubleshoot authentication failures, account lockouts, directory synchronization, and access issues to maintain reliable production identity services.
- Support incident ownership, operational documentation, and coordination across enterprise teams.

Full Stack Data Scientist **Mar 2025 - Aug 2025**
Innomatics Research Labs *Hyderabad, India*

- Developed two AI-driven data platforms: an enterprise forecasting dashboard for a private client and a public-transport demand analysis system for TGSRTC.
- Built interactive dashboards that connected forecasting models and a custom chatbot to stakeholder-facing workflows, applying CRISP-ML(Q) and Git-based delivery practices.
- Contributed substantially to the application and visualization layer of the winning Telangana AI Rising / AI4TG transport solution.

Project Intern **May 2023 - Jul 2023**
DRDO - Defence Research and Development Organisation *Hyderabad, India*

- Designed and implemented Python/Tkinter interfaces for device communication over the RS-422 protocol.
- Streamlined operator workflows and reduced communication errors during testing.

PROJECTS

TGSRTC Public Transport Demand Platform | *Forecasting, dashboards, decision support* **2025**

- Contributed to the web application that surfaced public-transport demand forecasts through visual exploration and stakeholder-oriented interpretation.
- Worked as part of the team that won the AI4TG Grand Challenge; the project is presented as a collaborative solution rather than a solo deployment.

Computer Vision Image Search | *Python, YOLOv11, Streamlit* **2025**

- Built a visual-retrieval pipeline that detects objects in image collections, creates a searchable label index, matches text queries, ranks results, and displays retrieved images.
- Separated detection, indexing, query matching, ranking, and presentation so detector-coverage and ambiguous-label limitations could be inspected.

Conversational RAG Application | *Streamlit, LangGraph, Hugging Face, Groq* **2025**

- Developed a multi-turn, document-grounded assistant with embedding-based retrieval, explicit retrieval and generation stages, maintained conversation state, and Groq inference.

ZAP - Ride-Hailing Platform | *React, Express, MongoDB, JWT* **2025**

- Built a full-stack ride-booking product covering account flows, vehicle selection, trip requests, protected routes, and persistent backend data.

Driver Drowsiness Detection System | *Python, OpenCV, NumPy, TensorFlow/Keras* **2024**

- Developed a real-time camera prototype that detects face and eye regions, interprets visual signals, and triggers fatigue alerts.
- Optimized the camera-to-alert processing flow while documenting that it is a prototype rather than a certified automotive safety system.

LOOP Chat App - Real-Time Messaging Platform | *React, Firebase, React Router* **2024**

- Engineered an authenticated messaging application with real-time conversations, shared state, route-based navigation, and media support.

Identifying Creditworthy Borrowers | *scikit-learn, Streamlit, NumPy* **2023**

- Built a classification workflow that prepares borrower data, generates creditworthiness predictions, and presents review-ready results through Streamlit.

Image Processing and Segmentation Experiments | *OpenCV, PyTorch, YOLOv11, U-Net, Detectron2* **2023 - 2025**

- Implemented enhancement, histogram equalization, filtering, thresholding, transforms, contours, morphology, edge detection, detection, and segmentation in reproducible notebooks.

EXTRA-CURRICULAR ACTIVITIES & RECOGNITION

- Winner, AI4TG Grand Challenge / Telangana AI Rising: contributed to an AI solution for improving public-transport utilization (team recognition).

Additional exploratory work includes radar-threat classification, medical-image classification, eye segmentation, stereo-depth estimation, sentiment analysis, and voice-driven ordering prototypes.
