Chetan Srikant Mandiga

+91 9989714684 | chetansrikantmandiga@gmail.com | LinkedIn | GitHub | Hyderabad, India

OBJECTIVE

Systems Engineer with hands-on experience in Active Directory, Azure AD, and enterprise identity systems, backed by a strong foundation in applied AI, computer vision, full-stack development, and data platforms. Experienced in building AI-backed applications and supporting production infrastructure, with particular depth in computer vision (detection, segmentation, real-time inference) and LLM-based systems. Interested in AI systems engineering, scalable platforms, computer vision, and cloud-based AI deployment.

EDUCATION

B.Tech in Computer Science and Engineering (Minor: Entrepreneurship) – *BML Munjal University* 2021 – 2025

SKILLS

Languages: Python, Java, C++, JavaScript

AI, ML & Computer Vision: NumPy, Pandas, Scikit-learn, PyTorch, TensorFlow/Keras, OpenCV, YOLOv11, U-Net, Detectron2, Faster R-CNN

Web & Frameworks: React.js, Node.js, Express, Next.js, Streamlit, LangGraph

Databases & Platforms: MongoDB, MySQL, Firebase, Active Directory, Azure AD, SQL Server (T-SQL)

Tools & Concepts: Git, REST APIs, Hugging Face embeddings, Groq, DSA, OOP, feature engineering, forecasting, system-design fundamentals

EXPERIENCE

Systems Engineer – IAM Cloud (Active Directory / Azure AD) – *HCLTech, Noida, India* Aug 2025 – Present

- Manage Active Directory and Azure AD environments supporting user provisioning, access control, and hybrid-identity integration in an enterprise setup.
- Author PowerShell and Python scripts for AD object auditing, bulk attribute updates, and group-membership reporting; query SQL Server / T-SQL–backed data for compliance reporting.
- Troubleshoot authentication failures, account lockouts, and directory synchronization issues to maintain reliable production identity services.
- Support incident ownership, operational documentation, and coordination across enterprise teams.

Full Stack Data Scientist – *Innomatics Research Labs, Hyderabad, India* Mar 2025 – Aug 2025

- Developed two AI-driven data platforms: an enterprise forecasting dashboard for a private client and a public-transport demand analysis system for TGSRTC.
- Built interactive dashboards connecting forecasting models and a custom chatbot to stakeholder-facing workflows, applying CRISP-ML(Q) and Git-based delivery practices.
- Contributed substantially to the application and visualization layer of the winning Telangana AI Rising / AI4TG transport solution (team project).

Project Intern – *DRDO – Defence Research and Development Organisation, Hyderabad, India* May – Jul 2023

- Designed and implemented Python/Tkinter interfaces for device communication over the RS-422 protocol.
- Streamlined operator workflows and reduced communication errors during testing.

PROJECTS

TGSRTC Public Transport Demand Platform | Forecasting, dashboards, decision support 2025

- Contributed to the web application surfacing public-transport demand forecasts through visual exploration and stakeholder-oriented interpretation; part of the team that won the AI4TG Grand Challenge.

Computer Vision Image Search | Python · YOLOv11 · Streamlit 2025

- Built a visual-retrieval pipeline: object detection, searchable label index, text-query matching, ranking, and result display — with detection, indexing, and presentation separated so detector-coverage and label-ambiguity limitations could be inspected independently.

Conversational RAG Application | Streamlit · LangGraph · HuggingFace · Groq 2025

- Built a multi-turn, document-grounded assistant with embedding-based retrieval, explicit retrieval/generation stages, maintained conversation state, and Groq inference.

Image Processing and Segmentation Experiments | OpenCV · PyTorch · YOLOv11 · U-Net · Detectron2 2023 – 2025

- Implemented enhancement, histogram equalization, filtering, thresholding, transforms, contours, morphology, edge detection, detection, and segmentation across reproducible notebooks.

ZAP – Ride-Hailing Platform | React · Express · MongoDB · JWT 2025

- Built a full-stack ride-booking product covering account flows, vehicle selection, trip requests, protected routes, and persistent backend data.

Driver Drowsiness Detection System | Python · OpenCV · NumPy · TensorFlow/Keras 2024

- Built a real-time prototype detecting face/eye regions and triggering fatigue alerts; optimized the camera-to-alert pipeline (prototype, not a certified automotive safety system).

LOOP – Real-Time Messaging Platform | React · Firebase · React Router 2024

- Built an authenticated messaging app with real-time conversations, shared state, route-based navigation, and media support.

Identifying Creditworthy Borrowers | Scikit-learn · Streamlit · NumPy 2023

- Built a classification workflow preparing borrower data, generating creditworthiness predictions, and presenting review-ready results via Streamlit.

CERTIFICATIONS

- Complete Generative AI Course with LangChain and HuggingFace — Udemy (60 hrs, Jun 2026)
- Complete Computer Vision Bootcamp with PyTorch & TensorFlow — Udemy (59.5 hrs, May 2026)
- Complete Data Science, Machine Learning, DL, NLP Bootcamp — Udemy (99 hrs, May 2026)
- Meta Front-End Developer Professional Certificate — Coursera (Nov 2024)

EXTRA-CURRICULAR ACTIVITIES & RECOGNITION

- Winner (team), AI4TG Grand Challenge / Telangana AI Rising — contributed to an AI solution for improving public-transport utilization.
- Additional exploratory work: radar-threat classification, medical-image classification, eye segmentation, stereo-depth estimation, sentiment analysis, and voice-driven ordering prototypes.
